Joe, the Cabo Rojo Groundwater Contamination site was proposed 10/21/10 and finalized on the NPL 3/9/11.
The site is being handled as one of the ICP sites with ERT doing field work, soil gas, groundwater sampling, etc.
The soil gas investigation has revealed 2 locations with elevated levels of VOCs near day-care centers.
Can the OSC assigned to this site conduct follow-up air sampling at these 2 day-care facilities.
The site RPM is Denise Zeno.

Let me know.

The sampling results for the SG vapor at the Head Start Program/Center located at the Ana Maria Strip Mall (adjacent to Extasy Q Print Shop) in Cabo Rojo shows:
PCE @ 4970 ppbv,
TCE @ 83 ppbv, and
DCE @ 50ppbv

We should also sample another daycare/pre-school called Colegio Mafalda (787) 255-1744 located at Ext Carbonell Sec La Charca, **Cabo Rojo**, PR. Mafalda is adjacent to another former dry cleaner where we got hits of PCE and TCE. We didn't collect SG vapor at this pre-school.
